

COVID-19 POLL

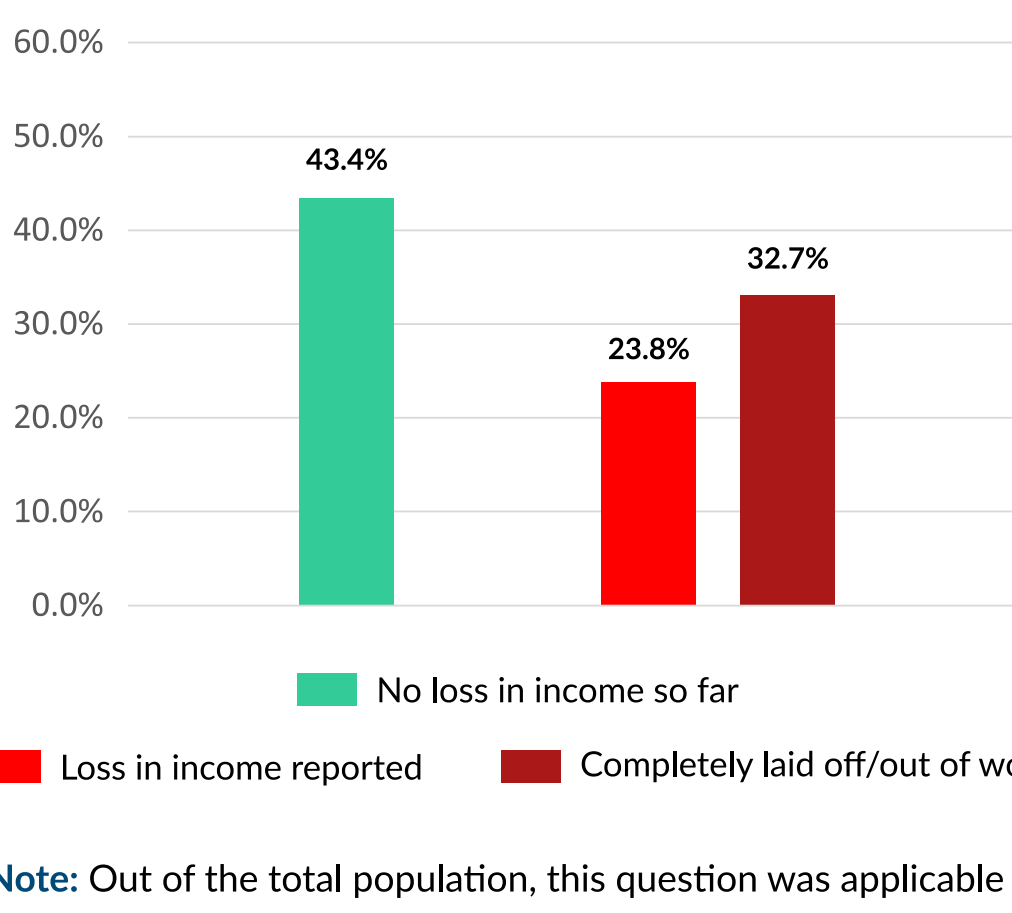

56.5% of Indian households report a negative impact on their income since the Coronavirus lockdown

Team CVoter conducted a survey during 8th-12th May 2020 to find out about the economic wellbeing of Indians across the country amidst the Coronavirus. In this survey, respondents were asked about the impact of the nationwide Coronavirus lockdown on their work-home life, working patterns, income, job security and optimism about the future.

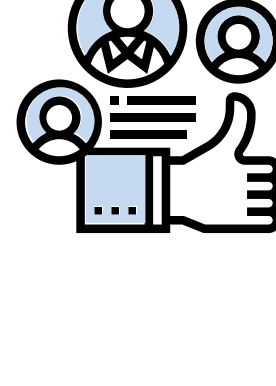

In today's infographic, Team Polstrat breaks the economic impact of the Coronavirus crisis on incomes of Indians across the country.

Which of the following is applicable for you or the main wage earner of your family since the lockdown has been implemented?

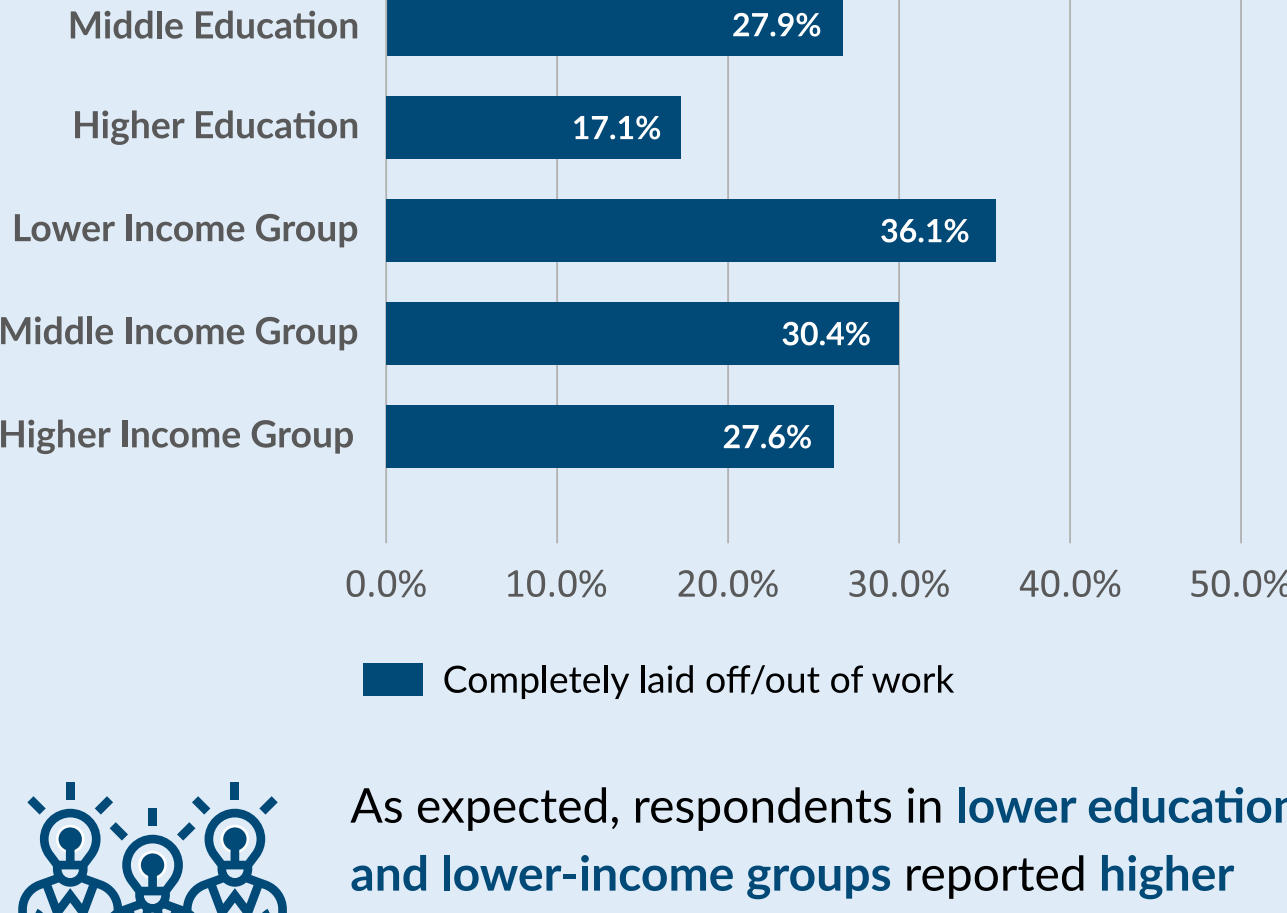

Note: Out of the total population, this question was applicable to 75.5% of households.

Overall, **56.5%** of households had their incomes negatively impacted by the Coronavirus lockdown. A significant proportion of these households (**32.7%**) were completely out of work or had been laid off since the lockdown started.

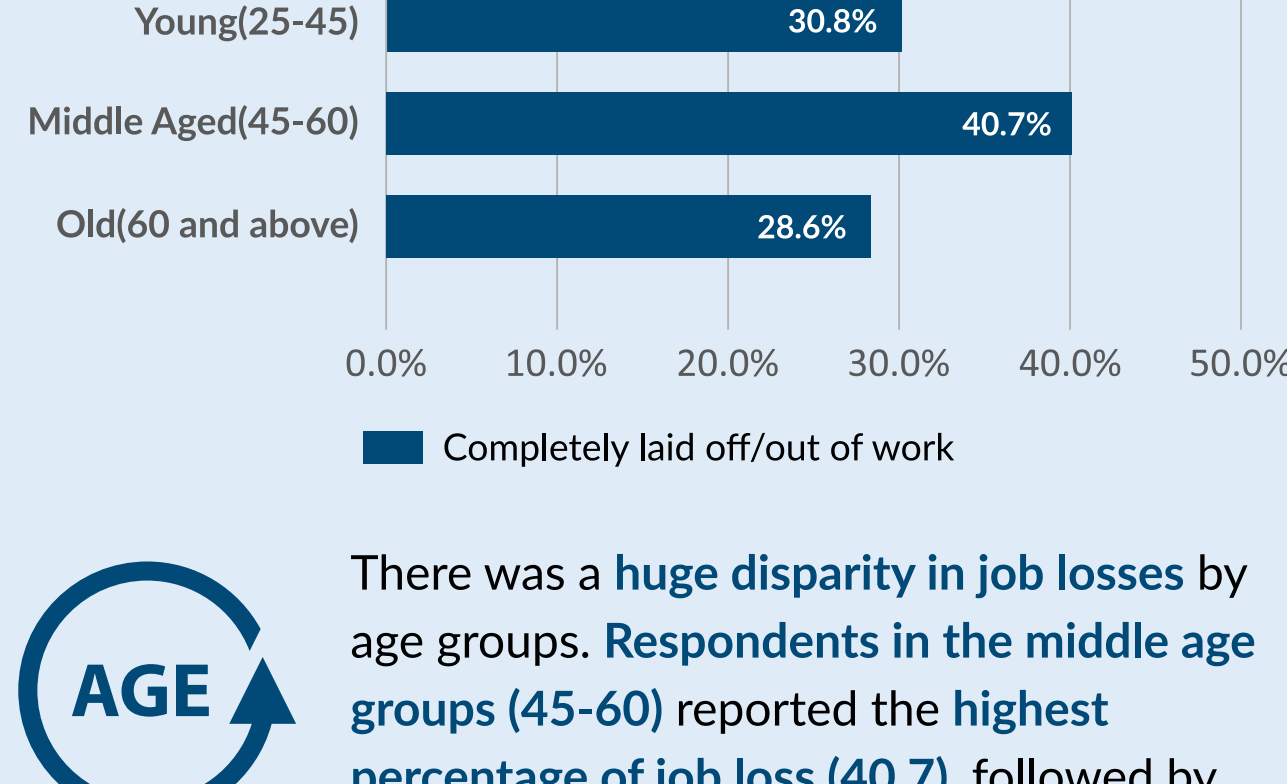

Who lost their jobs?

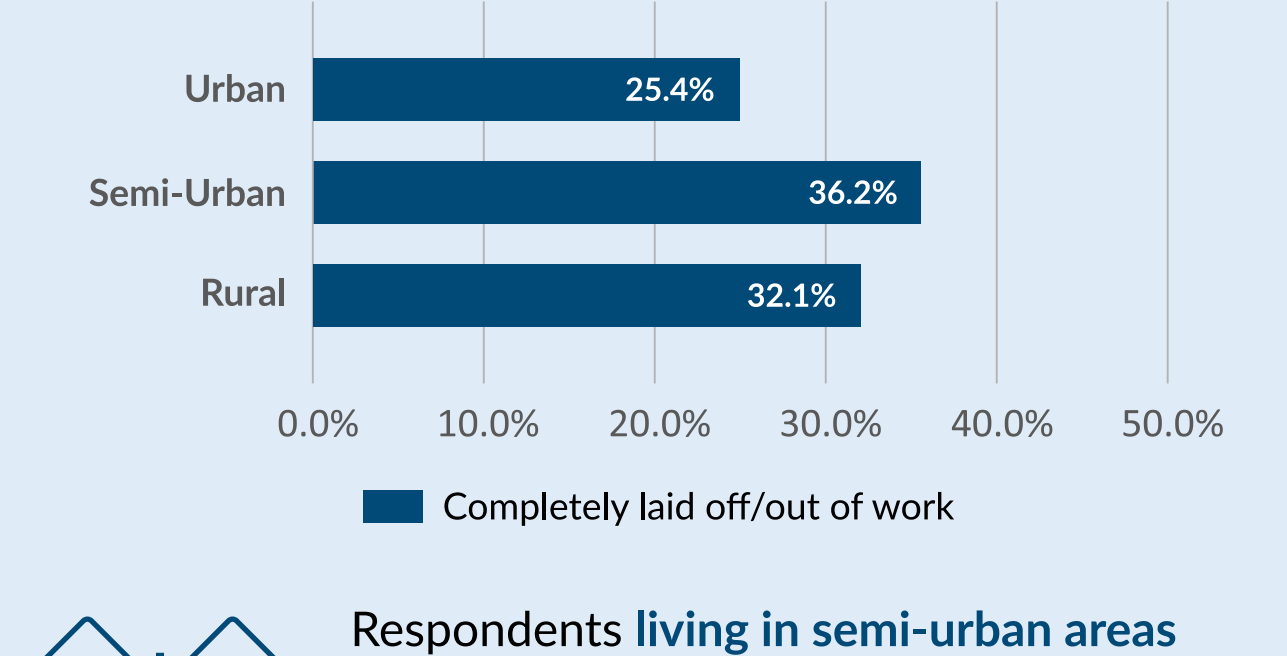

As expected, respondents in lower education and lower-income groups reported higher rates of job loss when compared to those in middle and higher education and income groups.

Those with lower education reported the highest rate of job loss (38.2%), followed by those with lower income (36.1%). The lowest rate of job loss was reported by those in the higher education group (17.1%).

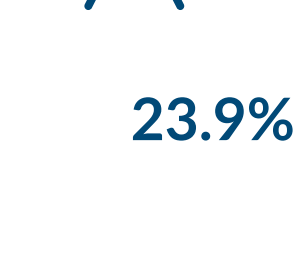

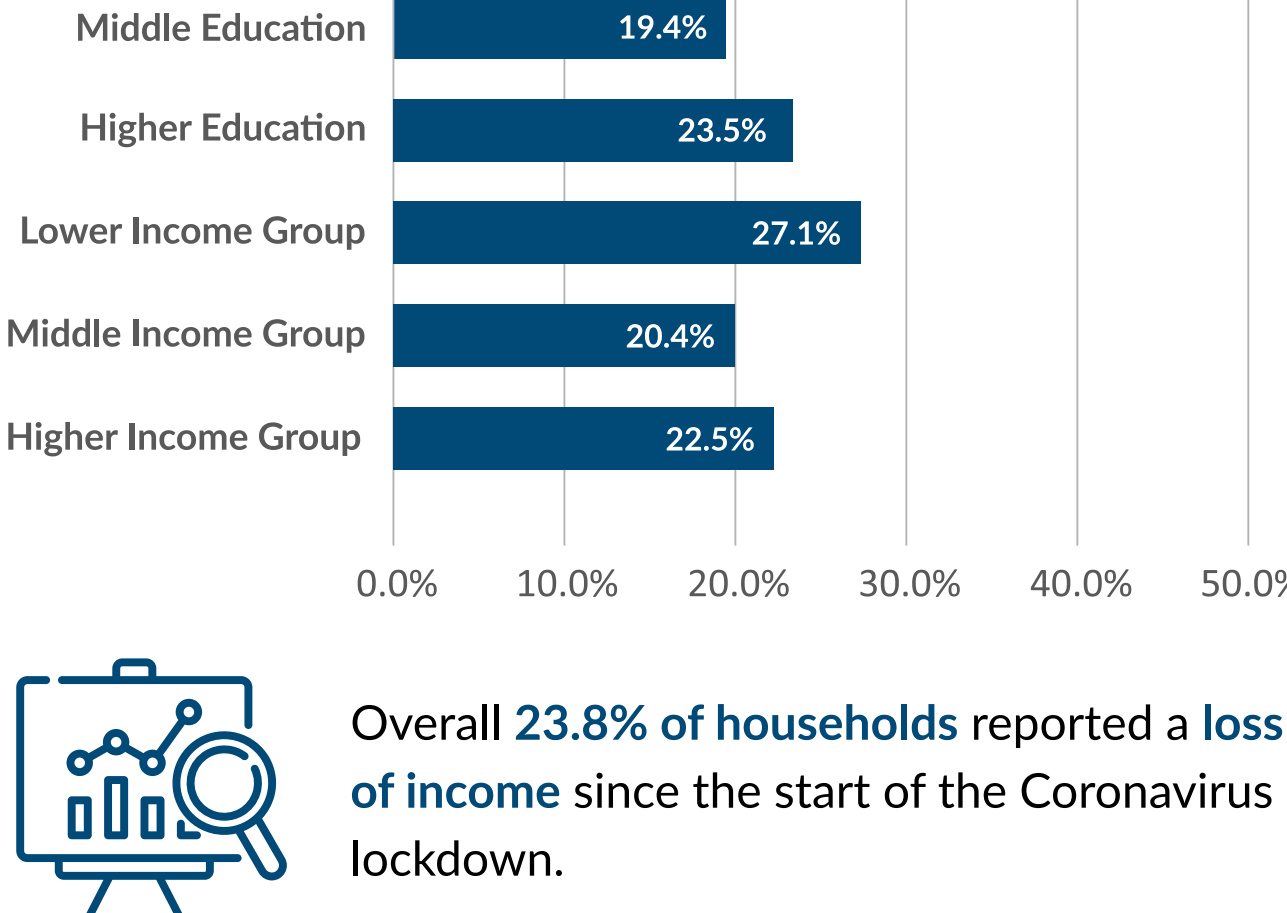

There was a huge disparity in job losses by age groups. Respondents in the middle age groups (45-60) reported the highest percentage of job loss (40.7), followed by freshers (33%) and youngsters (30.8%). The lowest percentage of job loss was reported by those in the older age group (28.6%).

Respondents living in semi-urban areas reported the highest rate of job loss (36.2%), followed by those living in rural areas (32.1%). Those living in urban areas reported the lowest percentage of job loss (25.4%), perhaps due to their ability to work from home.

Who suffered from a loss in income?

Overall **23.8%** of households reported a loss of income since the start of the Coronavirus lockdown.

23.9% of males and females who reported a loss of income.

Across education and income groups, those in the lower education (25.6%) and income (27.1%) bracket were most likely to suffer a loss of income. Interestingly, respondents in the middle education group (19.4%) reported the lowest percentage of drop in income. This figure was lower than that reported by those in higher education (23.5%) and income groups (22.5%).

All survey findings and projections are based on the Team CVoter COVID 19 survey carried out in May 2020 among 18+ adults statewide, including every major demographic.

The data is weighted to the known demographic profile of every state, including age group, social group, income, region, gender and education levels. (Sample Size: 1423)
