

# COVID-19 POLL

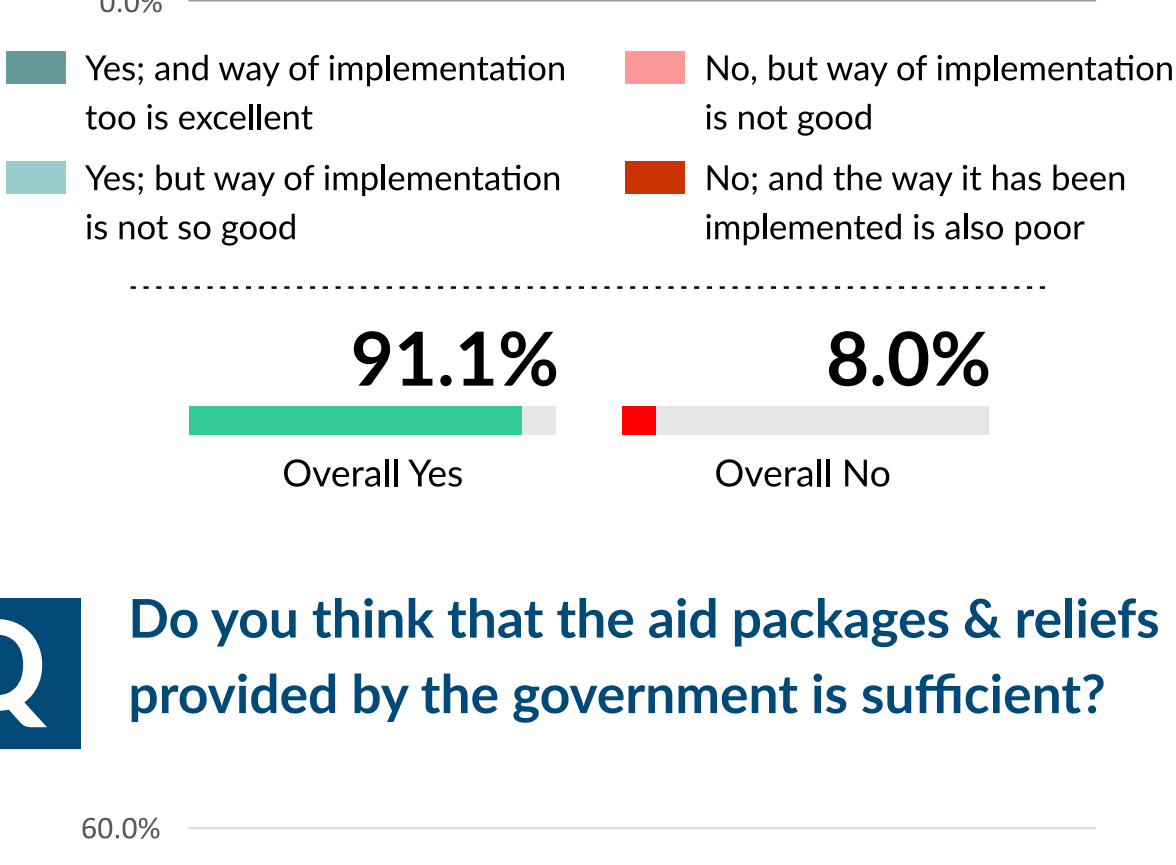

Only 35.5% of Indians think the Coronavirus aid and relief provided by the government is completely sufficient

The Team CVoter Corona Tracker Economy Battery (Wave 3) survey conducted in May 2020 asked respondents about their view of the effect of the Coronavirus crisis and lockdown on their economic condition. The survey included questions on respondents' viewpoint on the implementation of the lockdown, the relief package announced by the government as well as fear of not being able to afford medical care, food and job loss.

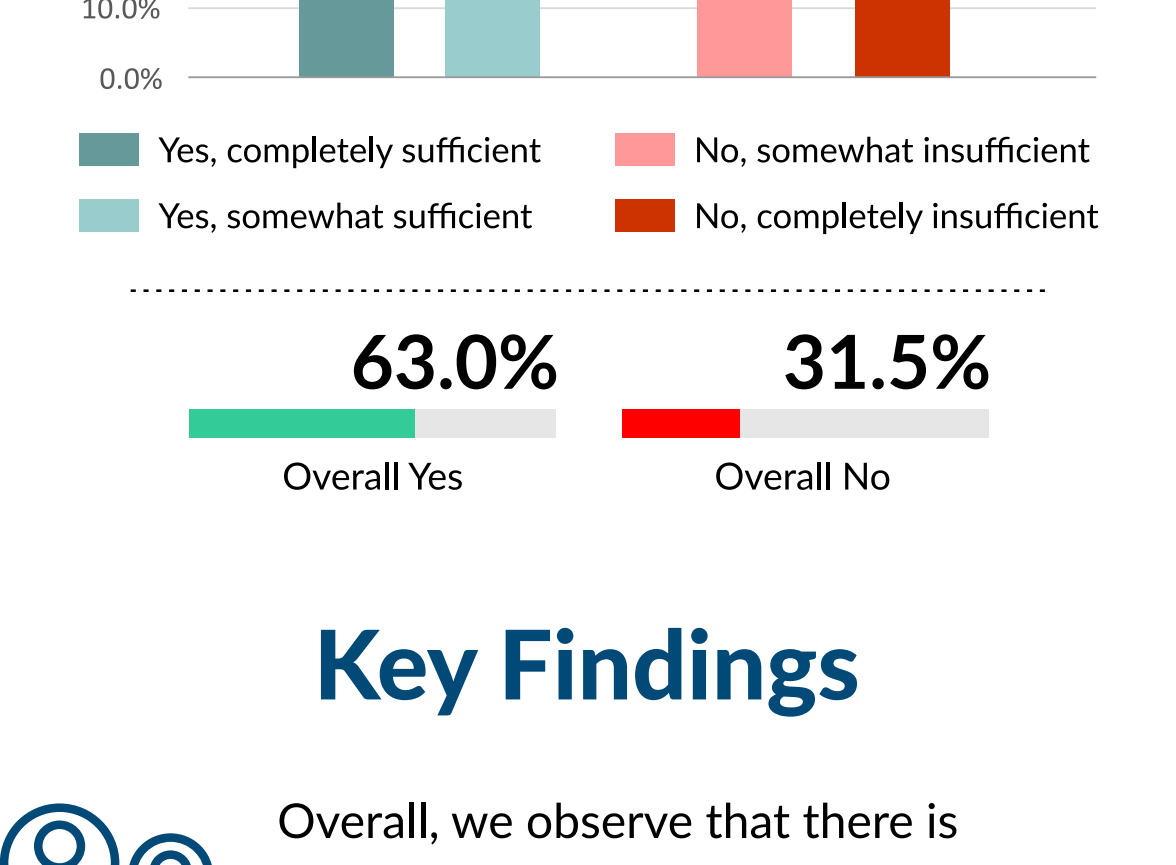

Overall, an overwhelming majority of respondents were supportive of the lockdown and the way it was implemented. In today's infographic, Team Polstrat breaks what respondents think of the aid and relief packages provided by the government.

## Do you support the nationwide lockdown implemented by the government and the way it has been implemented?

## Do you think that the aid packages & reliefs provided by the government is sufficient?

## Key Findings

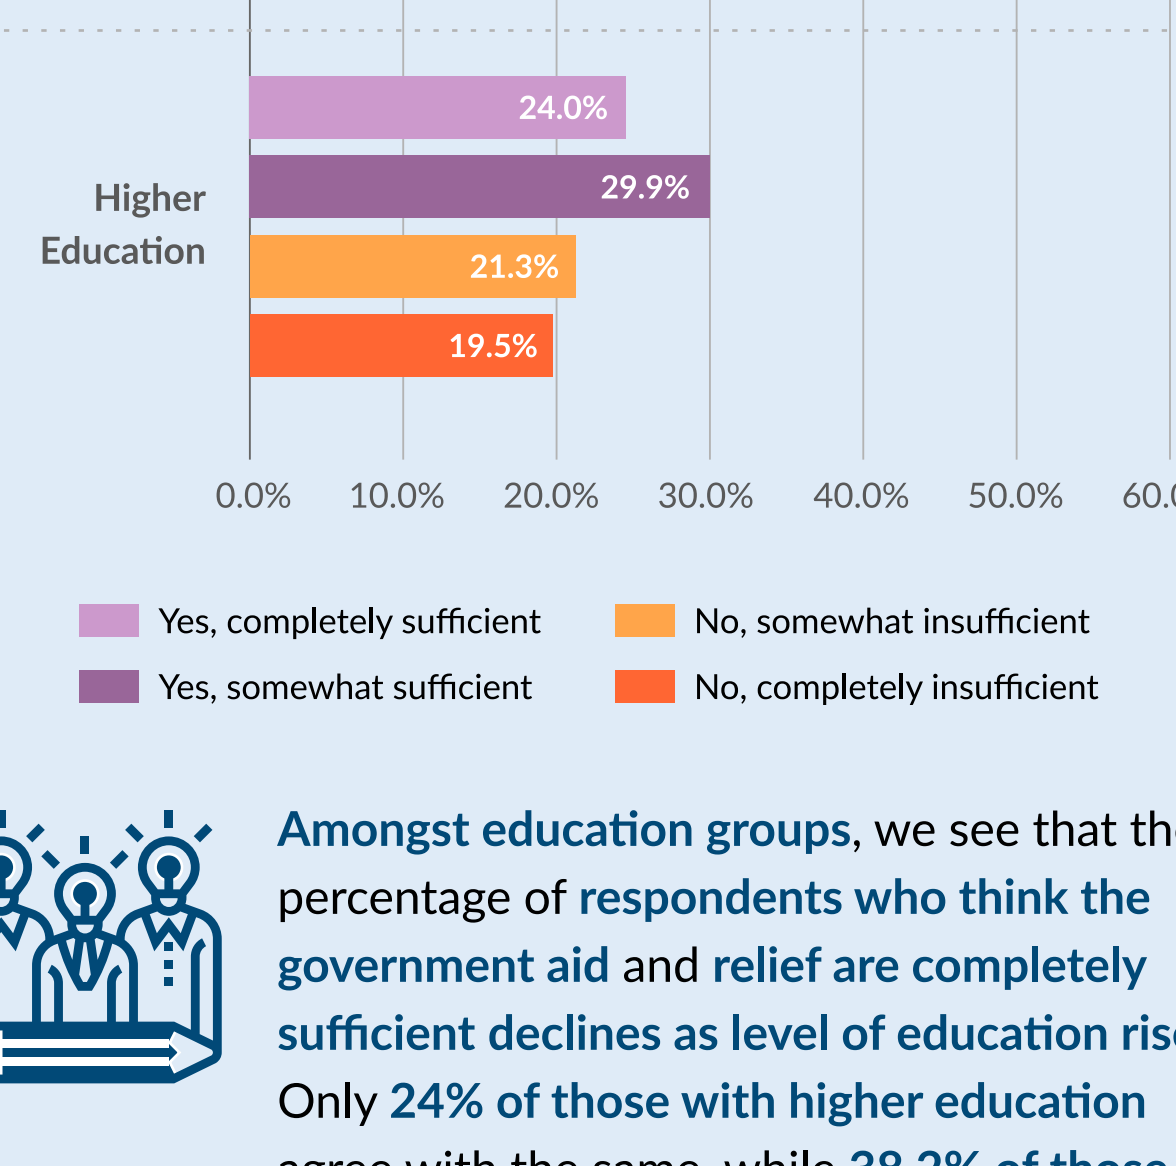

Overall, we observe that there is **overwhelming support (91.1%)** for the nation-wide lockdown implemented by the government. In fact, **79.8%** of respondents support both the lockdown and the way it was implemented by the government.

This overwhelming support is consistent across demographics such as age groups, gender, income and education.

Support for the relief packages provided by the government is mixed, with **35.5%** of people stating they think it is completely sufficient. Overall **63%** think the government relief was sufficient, while **31.5%** think it wasn't.

## Who thinks the government aid and relief being promised is sufficient?

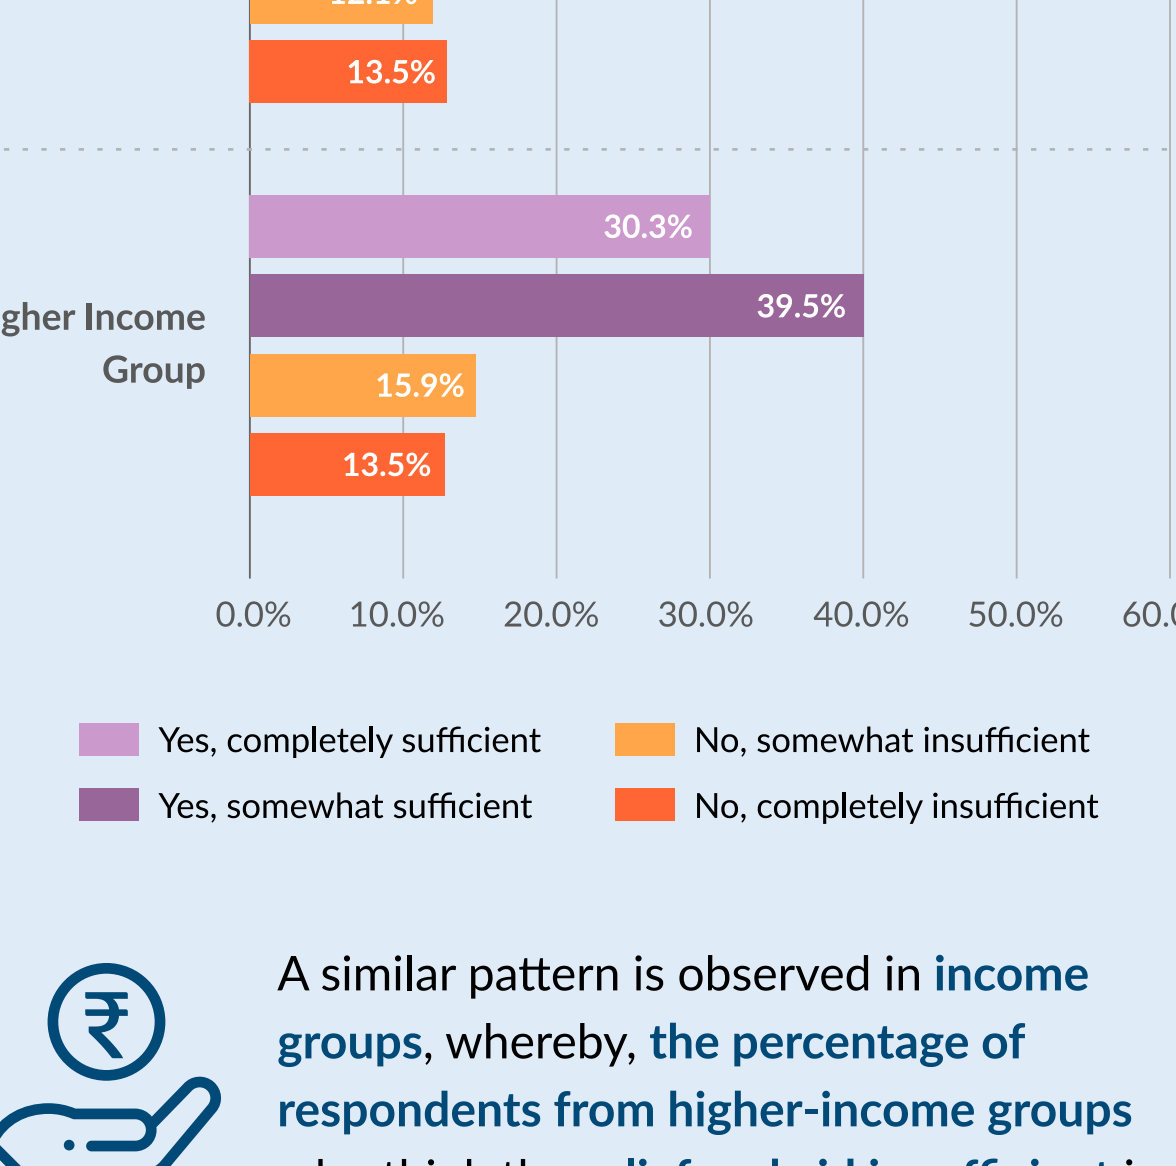

### Do you think that the aid packages & reliefs provided by the government is sufficient?

Amongst education groups, we see that the percentage of respondents who think the government aid and relief are completely sufficient declines as level of education rises. Only 24% of those with higher education agree with the same, while 38.2% of those with lower education think the same.

Similarly, 19.5% of those with higher education think the relief and aid is completely insufficient while, 17.9% of those with lower education think the same.

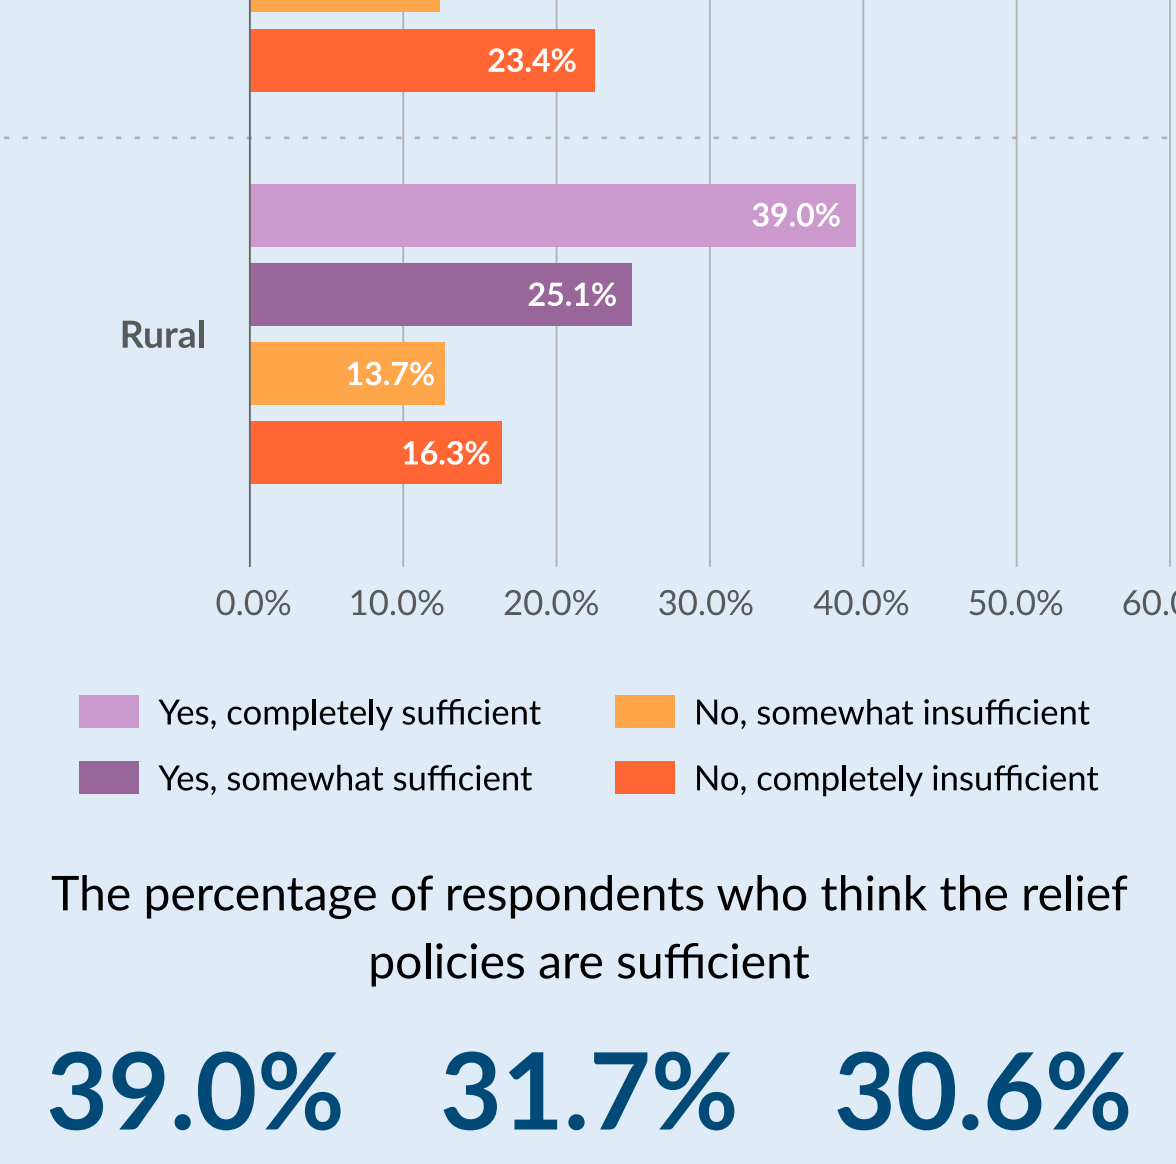

### Do you think that the aid packages & reliefs provided by the government is sufficient?

A similar pattern is observed in income groups, whereby, the percentage of respondents from higher-income groups who think the relief and aid is sufficient is much lesser (30.3%) as compared to those in lower-income groups (37.2%).

Interestingly, if we look at the total yes and no figures (combining somewhat sufficient and completely sufficient), we observe that higher income groups have the highest approval rating for the relief packages (69.8%), while lower-income groups have the lowest (58.9%).

### Do you think that the aid packages & reliefs provided by the government is sufficient?

The percentage of respondents who think the relief policies are sufficient

**39.0%** Rural    **31.7%** Urban    **30.6%** Semi-Urban

However, if we look at the total yes figures (combining somewhat sufficient and completely sufficient), both urban and rural respondents have similar percentages of respondents (64.9% urban and 64.1% rural) who think the aid and relief is sufficient.

All questions had a "Don't Know/Can't Say" option that respondents could also select. This was 0.9% for Q1 and 5.5% for Q2. All survey findings and projections are based on the Team CVoter Corona Tracker Economic Battery Wave 3 survey carried out in May 2020 among 18+ adults statewide, including every major demographic. The data is weighted to the known demographic profile of every state, including age group, social group, income, region, gender and education levels. (Sample Size: 1474)
